SWATCH GROUP U.S.

FAQ's and Other Important Information

To make a diagnosis of your timepiece, our watchmaking service will have to open the case in order to gain access to the movement. In the case of a refusal of the proposal or a return, we do not guarantee the functioning of the watch, even if it was functioning at the time of deposit. Only a partial or full service (depending on the diagnosis) can ensure the correct functioning of the watch. We provide a guarantee* on partial and full maintenance (*from the date of leaving the workshop, please see individual brand pages for length of warranty).

Maintenance work carried out by the Swatch Group, US Service Centers is exclusively guaranteed by these locations.

What are the service intervals?

Like any high precision instrument, a watch needs to be serviced regularly in order for it to work perfectly. Obviously, we cannot indicate the exact intervals for such work, given that it depends entirely on the model, climate and the care taken by the watch's owner.

What should I do to ensure that my watch continues to provide excellent service for many years?

- **Magnetic fields:** avoid placing your watch on speakers or refrigerators, since these have strong magnetic fields.
- **Bathing in the sea:** always rinse your watch with warm water afterwards.
- **Shocks:** whether thermal or other, avoid them.
- **Crown:** screw it in carefully to ensure that no water enters the mechanism.
- **Cleaning:** for metal bracelets and for all water-resistant cases use a soft brush with soapy water and a soft cloth for drying.
- **Chemical products:** avoid direct contact with solvents, detergents, perfumes, cosmetic products, etc., since they may damage the bracelet, the case or the gaskets.
- **Temperatures:** avoid extreme temperatures (above 60C, or 140F, below 0C, or 32F) or extreme temperature changes.
